

WE ARE ENGAGED IN THE PROTECTION OF OUR PLANET AND CORSICA

Realistic engagements, for a durable approach

OUR CONCRETE ACTIONS

All the area of the hotel (rooms and common areas) are non-smoking.

The hotel is always looking for alternative cleaning solution to gradually substitute chemical products in favor of ecological and economic solutions.

ENERGY :

Window opening detector have been installed to stop left on air conditioning/heating.

Motion detectors have been installed in hallways. It allows that lights only illuminate when it is needed. It also significantly reduces the amount of energy used without affecting our quality of life.

A business corner is free of charge for our customers, they can access to Internet easily. Each screen (business corner screen or reception screen) automatically goes into standby mode after an unused time.

Low energy LED bulbs were preferred.

Concerned about the development of electrically powered vehicles, we have equipped our garage with electric terminals.

RÉDUCTION DE L'EAU :

The showers were preferred to bathtubs in our renovations.

Water savers have been installed on faucets and flushes.

L'ACQUALE

CALVI

WATER:

We also use an ozonated water system. An incredible natural cleaner, ozonated water thoroughly disinfects and cleans all types of surfaces, killing 99% of bacteria, without allowing or using any chemical and pollutants.

Use /wash sheets and towels.

Customers who wish to get involved in our ecological program can request less frequent washing of their sheets, currently changed every 3 days, and their towels currently changed every day. They participate in the effort that we implement, from an ecological point of view, reusing towels, it is water and transport (CO2) less.

An automatic and connected watering of the garden has been chosen. It is connected to a water station, allowing it to have intelligent management of water quantities and days when it is not necessary to water.

WASTE MANAGEMENT:

We apply selective sorting everywhere. It is invisible to you, but the waste is sorted from the individual bins of the rooms and common areas. All waste that is recoverable and recyclable is stored separately. Sorting should be an obvious automatic and above all responsible gesture.

Regarding hospitality products in rooms, we have chosen to make available the essentials without surplus, in order to respect the principles of anti-waste.

Sensitized to the idea of a smart and responsible consumption of our supplies and especially of paper, the hotel turns to the dematerialization of its procedures: end of the systematic printing of invoices, limitation of impressions of reservations.

Newspapers are available to guests at the reception, to avoid paper waste and reduce our waste.

The water cups in the bedroom and bathroom are made of glass to be machine cleaned and reused.

A LOCAL CONSUMPTION:

Consuming better is also choosing to consume products from of our region.

First of all, we are fortunate to have passionate producers and artisans who offer high-quality products, and to privilege short circuits makes for reduce our carbon footprint. This is not limited to the purchase of food products, we also apply this policy on all our purchases when possible (consumables, decoration).

This choice allows us to contribute to the local economy of our region and to be part of its deployment and sustainability.

THE HOTEL TEAM, OUR STRENGTH

When an awareness of social and environmental issues, formal and informal exchanges are organized on an ad hoc basis to take stock of the avenues for improvement that we can consider at our scale: waste and bulky management, limiting food waste, seeking alternative solutions to avoid overconsumption of various products...

Everyone at their level and in their own way participates, drives ideas and commits to sustainable development.

Here you will find a non-exhaustive list of simple actions that you can easily reproduce, if you want to take part in our commitments.

- We invite you to turn off the lights and all electrical devices (television conditioned air...) that would have stayed on unnecessarily.
- It is advisable to unplug battery chargers once the devices are charged.
- Please remove your room card from the energy saver when you go out.
- Remember to turn off the water tap while you wash your teeth.
- A reasonable shower goes not exceed 5 minutes.
- To avoid waste, do not open or take at home the welcome products if you do not use them.
- Always close windows when heating or cooling your room.
- Remember to turn off the towel dryer after use and as soon as you leave the room.
- Take the time to select your waste, such as putting used batteries in a dedicated receptacle.
- Pay attention to instructions, including changing towel and sheets. In the bathroom the towels hanging from the coat hooks or towel dryers are the ones you keep. Those that need to be replaced are left on the ground.

We shared with you our philosophy and our devices to make our actions responsible and meaningful. Now we hope that you too will take part in this commitment, starting by applying simple measures that will become for you later, an automatism.
